

'Ellerker Wind Farm' now 'Bagletts Wind Farm'

January 12th SITE UPDATES! *click [Announcements](#), [Latest Updates](#), [The Applicant](#), [Humber Wildlife](#), [Articles](#)*

NOTE. The applicants have now removed the website (www.ellerkerwindfarm.com) - but details are available at the **East Riding of Yorkshire Planning Portal**, Ref: **14/03106/STPLFE**

Note also, the name of the proposed development has been changed from Ellerker Wind Farm to "BAGLETTS WIND FARM"

Stop Ellerker Wind Farm (SEWF) is an action group formed in February 2014 in response to an impending application by **WED Renewables** to build three 125m high Wind Turbines in the area of the boundaries of Ellerker, South Cave and Broomfleet Parishes.

These Wind turbines will be more than 2 x the height of the electricity pylons and will greatly affect the beauty of the landscape - one of the last stretches of the Humber unaffected by turbines. They will be a great eyesore visible from not only the immediate villages of Ellerker, South Cave and Broomfleet, but also Brantingham, Brough and Elloughton and probably North Cave.

We wish to stop this development not only due to it's massive and intrusive impact on the landscape and conservation areas but also due to the effect it will have on protected species such as the Marsh Harrier in particular which this area around the Humber Wild Fowl Refuge has the UK's most significant over wintering population.

This application if successful will also affect you in other ways which are not considered when planning is granted but which will greatly affect you as residents of the area.

This includes:

Noise - go and visit some of these big turbines stand down wind - you will be horrified!

Flicker - if you live near turbines and the sun is behind them it can be like a light switch being turned on and off up to 45 times a minute !

Health - There is growing evidence that the health of people living up to 5 miles from wind farms can be adversely affected.

Mobile phone signals - these are known to be affected by turbines.

Television signals - these are also known to be affected by turbines.

Property Saleability and Values - these are also greatly affected by the presence of turbines nearby.

To achieve this we not only need **your objections** but also *funding to employ a professional firm* to question all technical aspects of the application to hopefully prevent the applications success.

Thank you for your support. With your involvement we CAN STOP this intrusive development which will blight our lives for years to come!
